

TECH BULLETIN 036

How to Identify Your Pump — Cylinder and Plunger Reference Chart

Pumps manufactured by Cat Pumps should have a label clearly identifying the model number. If this label is not visible or has worn off, you can still identify your pump. On piston pumps, remove and measure one of the cylinders. On plunger pumps, you can remove and measure a ceramic plunger. See photos below for examples of the two different pump styles.

Page 2 has charts that list cylinder dimensions and crankshaft identification stamp numbers for current and obsolete piston pumps. Pages 3 and 4 cover ceramic plunger dimensions and crankshaft identification stamp numbers for current and obsolete ceramic plunger pumps. The final two pages list conversion model numbering and how to interpret these numbers.

Please note that the serial number stamped into the lower side of the crankcase or next to the mounting flange does not identify your pump model. The serial number does denote the date of production, however. See page 5 for more information regarding serial numbers.

Piston Pump

Plunger Pump

Crankshaft Identification Stamp Location

Solid Shaft Pumps

Includes all piston and plunger pumps, except 25 Frame and larger, where only 1 stroke option is used.

Hollow Shaft Pumps

1CX, 1DX, 2DX, 2SF, 2SFQ, 2SFX, 3DNX, 3DX, 3SP, 3SPX, 4DNX, 4DX, 4HP, 4SF, 4SPX, 5DX, 5SP, 6DX, 66DX, 67DX Series Pumps

Piston Pumps

1. Remove pump discharge manifold to access cylinder.
2. Measure the length of cylinder, inside diameter (ID) and outside diameter (OD) of cylinder as shown.
3. Identify the stroke of the crankshaft. The stroke is stamped (mm) on the end of the crankshaft.
4. With information from steps 2 and 3, use the Cylinder Dimensional Reference Chart to identify piston pump.

NOTE: Models 333, 430, 623, 820, 1010 can be identified without removing the discharge manifold by looking for the machined groove on the discharge end of cylinder.

Model 333 has one machined groove
Model 430 has no machined groove

Model 623 has one machined groove
Model 820 has two machined grooves

Model 1010 has no machined groove

Note: For configurations with multiple pump options, see Pump Model Number Breakdown.

Plunger Pumps

1. Remove pump manifold(s) to access ceramic plunger.
2. Measure the length of ceramic plunger and outside diameter as shown.
3. Identify the stroke of the crankshaft. The stroke is stamped (mm) on the end of the crankshaft for both hollow shaft and solid shaft models.
4. With information from steps 2 and 3, use the Ceramic Dimensional Reference Chart to identify plunger pump.

NOTE: If you have a hollow shaft pump, you will need to remove the pump from engine/motor to identify crankshaft identification stamp.

Note: For configurations with multiple pump options, see Pump Model Number Breakdown.

Serial Numbers

The serial number is stamped on the crankcase near the mounting feet for most models. On SF models, this number is on a label located on the flange of the pump.

The serial number lists the month and year of production in the first three characters. The date of production can assist you in determining the effective dates for changes in pump construction, performance or design, which will be listed on our Technical Bulletins.

The first character of the serial number indicates the month of production. Months are noted with a number for January through September (1, 2, 3, etc.) and a letter from October through December (O, N, and D). The second and third characters indicate the year of production.

- Example: Serial Number N010101 means the pump was built in November 2001 (N01).
- Example: Serial Number 2020253 means the pump was built in February 2002 (202).

Pump Model Number Breakdown

Once you have tentatively identified the possible pump models based on the plunger and crankshaft ID stamp combinations, the model number and suffix provide more information about the pump. Please read below to determine various manifold materials or configurations, seals or O-ring materials, shaft sizes, electric or gas drives, etc.

The last numerical digit in a three or more digit model number indicates the specific manifold material, manifold configuration, or if it has cups or cylinders/sleeves.

Suffix	Examples	
0	280 310	Base models equipped with Buna-N seals and O-rings Piston pump Plunger pump
1	281 311	316 stainless steel manifolds 304 stainless steel valves – piston pumps 316 stainless steel valves – plunger pumps
2	432 6762	Piston pumps Unchromed 304 stainless steel cylinders, sleeves and manifolds Plunger pumps Duplex stainless steel manifolds
3	333	Piston pumps Machined high-pressure cups, standard manifold
4	6864	Plunger pumps Super duplex stainless steel block-style manifolds
5	335	Piston pumps Pulse ported discharge manifold
6	436	Piston pumps Unchromed 304 stainless steel cylinders and sleeves, standard manifold
7	317	Nickel aluminum bronze Plunger pump

The last three or four alpha characters in a model number covers a wide range of options as noted.

B	5CP2120B	Special formulated brass manifolds Plunger pump
BH	2560BH	Bell housing ready Plunger pump
C	2520C 311C	Flushed inlet manifold Piston pump Plunger pump
C1	290C1 340C1	Clutch pump – 1 groove Piston pump Plunger pump
C2	290C2 340C2	Clutch pump – 2 grooves Piston pump Plunger pump
CS	3CP1120CS	Single shaft, right side Plunger pump
CSS	5CP3120CSS	Single shaft, right side, side gauge left Plunger pump
D	661D	Duplex stainless steel Plunger pump
E	1540E	Epoxy painted, special liquid gasket Plunger pump
EES	2SF10EES	Direct drive – electric, 5/8" hollow shaft, no unloader, 3450 RPM Plunger pump
EL	4SP21EL	Direct drive – electric, 5/8" hollow shaft, no unloader, 1750 RPM Plunger pump

Suffix	Examples	
ELS	2SF22ELS 5SP30ELR	Direct drive – electric, with unloader, 1725 RPM Plunger pump – 5/8" hollow shaft Plunger pump – 1 1/8" hollow shaft
ER	4DX10ER	Direct drive – electric, 5/8" hollow shaft, integral regulator, 3450 RPM Plunger pump
ES	2SF22ES	Direct drive – electric, 5/8" hollow shaft, with unloader, 3450 RPM Plunger pump
EUF	4DX15EUF	Direct drive – electric, 5/8" hollow shaft, integral unloader, garden hose fitting, 3450 RPM Plunger pump
G	3CP1120G	Gearbox pump – 3/4" shaft Plunger pump
G1	45G1	Gearbox pump – 1" shaft Plunger pump
G118	56G118	Gearbox pump – 1 1/8" shaft Plunger pump
G1I	66DX40G1I	Direct drive – gas, 1" hollow shaft, with unloader, chemical injector, 3400 RPM Plunger pump
GES	2SF35GES	Direct drive – electric, 3/4" hollow shaft, with unloader, 3450 RPM Plunger pump
GG1	66DX40GG1	Direct drive – gas, 1" hollow shaft, no unloader, 3400 RPM Plunger pump
GS	2SF30GS	Direct drive – gas, 3/4" hollow shaft, with unloader, 3450 RPM Plunger pump
GSI	4DNX25GSI	Direct drive – gas, 3/4" hollow shaft, chemical injector, integral unloader, 3450 RPM Plunger pump
GZ	2SF30GZ	Direct drive – gas, 3/4" hollow shaft, with unloader, 3450 RPM Plunger pump
HS	3507HS	High-strength drive-end Plunger pump
HYD	3K121HYD	Hydraulic-powered pump unit Centrifugal pump
K	781K	Flushed block-style inlet manifold Plunger pumps
P	1560P	Manifold with pulsator assembly Plunger pump
RS	56RS	Reverse shaft Plunger pump
RSS	5CP3160RSS	Reverse shaft left side, side gauge right side Plunger pump
S	310S	Solid stainless steel inserts Plunger pump
SEEL	2SF22SEEL	Direct drive – electric, 5/8" hollow shaft, no unloader, 1725 RPM, SS Manifolds Plunger pump
W	5CP2120W	Special W770 alloy manifolds Plunger pump

The suffix numbering following the period after the base number covers valves (flat), inverting manifolds, seals, cups and O-rings:

Suffix	Examples	
.0001	820.0001	Flat valve assemblies found in piston pumps Standard in 25 and 60 frame piston pumps (quiet valves are standard in 3, 4, 5 and 10 frame piston pumps)
.0005	333.0005	Inverted inlet and discharge manifolds on both piston and plunger pumps
.0008	290.0008	Inverted inlet manifolds on both piston and plunger pumps
.0009	390.0009	Inverted discharge manifolds on both piston and plunger pumps
.0090	781K.0090	Piston or plunger pumps with 90 duro O-rings
.0100	280.0100	Piston or plunger pumps with FPM seals
.0110	310.0110	Piston or plunger pumps with FPM seals and O-rings
.0220	310.0220	Piston or plunger pumps with EPDM seals and O-rings
.0300	333.0300	Piston pumps with Blue Dot Seals
.0700	1050.0700	Piston or plunger pumps with PTFE seals and NBR O-rings
.0710	1810.0710	Piston or plunger pumps with PTFE seals and FPM O-rings
.0770	1050.0770	Piston or plunger pumps with PTFE seals and O-rings
.0777	3531.0777	Piston or Plunger pumps with PTFE seals and PTFE backup rings, O-rings
.3000	430.3000	Piston or Plunger pumps with high-temperature, high-pressure cups or seals Piston pump – V-hot cups
	56.3000	Plunger pump – high-temperature high-pressure seal
.3400	3CP1130.3400	Plunger pump high-temperature high-pressure seal or V-packing, special blend PTFE low-pressure seals
.3410	1051.3410	Plunger pump high-temperature high-pressure seal or V-packing, special blend PTFE low-pressure seals, FPM O-rings
.4400	1540E.4400	Piston or plunger pumps with special blend PTFE high and low-pressure seals
.4410	241.4410	Plunger pumps with special blend PTFE high and low-pressure seals, FPM O-rings
.44101		Plunger pump seals and O-rings
	1050.44101	Special-blend PTFE high-pressure and low-pressure seals, FPM O-rings, FPM crankcase seals and O-rings
.6000	1051.6000	Piston or plunger pumps with silicone free seals and O-rings
.9000	550.9000	Piston or plunger pumps – rebuilt

Cat Pumps configures a number of pumps for special applications and certifications such as ATEX, CO2, TEG, Flushed, High-Temperature and others. Need help determining your pump model? Contact us at (763) 780-5440 or techsupport@catpumps.com.
