SUBJECT: Seal case modification

Models: 3CP1120, 3CP1120.3400, 3CP1130, 3CP1130.3400, 3CP1140, 3CP1140.3400

The seal case has been improved by increasing the chamfered surface on the large inside diameter of the seal case. This modification to the seal case will ensure proper installation and eliminate potential damage when installing all types of Lo-Pressure seals.

Seal case 49426 used in conjunction with our special ST Lo-Pressure seal has been obsoleted and has been replaced with the modified seal case part number 46625. If retrofitting a pump with a suffix part number (.3400) prior to April 2010, use seal kit 76526 that includes seal case 46625. After April 2010, all pump models as listed above will include this modified seal case.

This change will be phased in starting with April 2010 production.
