Aged to Perfection

The Pumps with Nine Lives

CAT PUMPS is celebrating 35 years of providing dependable pump solutions for users around the world. We have been told that we set a new standard of excellence for pumps when we introduced our first model 400 car wash pump in 1968 and we are proud of that attribute. The tremendous growth this market has seen and our high market share support the high quality of our pumps.

William Bruggeman, the founder, had a vision to provide pumps that last longer and require less maintenance. We placed our focus on the highest quality materials, closely held manufacturing tolerances and exceptional service to support these goals. Our customers confirm the result is “The Pumps with Nine Lives” and exceptional customer service.

We thank the many users, distributors and OEMs who have appreciated our quality products and service and have shared their ideas to make our success possible. It takes a team to be successful and we have an excellent team.

CAT PUMPS began with the car wash and pressure cleaning market, but we have expanded into hundreds of industrial applications including SWRO, in-plant central cleaning systems, water based hydraulics, hydrostatic testing, sewer cleaning, wastewater re-injection, misting, hydro excavating and carpet cleaning to name just a few. The applications for pumping liquids at high pressure continue to expand and we plan to continue designing and building pumps to meet these needs.

Our patented sleeved-piston rod design, piston pumps, our exclusive design and material seals and concentric solid ceramic plunger in our plunger pumps, our block-style flushing and cooling feature, our R-Series large capacity Duplex Stainless Steel pumps, our complimentary stainless steel submersible and end-suction centrifugal pumps and our very popular custom engineered Power Units are just a few of the developments that have occurred over the last few decades. Please review the Evolution of CAT PUMPS in the ABOUT US section of our web site for complete details on our product line development.

Thank you for your support. We look forward to working with you for another 35 years!
