

PRESS RELEASE

New “K” Series Pumps Brochure SS Submersible and Centrifugal Pumps

CAT PUMPS is very pleased to announce the **Stainless Steel “K” Series Brochure**. This brochure highlights CAT PUMPS new complimentary line of stainless steel submersible and centrifugal pumps. The “K” series offer solutions for many pumping needs including submersible pumps that handle semi-dirty liquids or liquids with suspended solids up to 2" and end-suction centrifugal pumps for high flow, low pressure booster, spraying and transfer applications.

The “K” series submersible pumps and end-suction centrifugal pumps are **all built of stainless steel** providing long lasting performance and exceptional value.

The special **bulge-form** technology of the stainless steel components provides uniform thickness with no sharp angles or weak stress points. It is this process that assures the superior quality, greater strength, increased efficiencies, lighter weight, continuous-duty performance and exceptional value of the “K” pumps. The best feature is **stainless steel quality at cast iron prices**.

The submersible pumps are ideal for applications requiring draining or transfer of liquids from car wash pits, marine bilges, septic tanks, sewage treatment plants, swimming pools, excavation sites and many more. The end-suction centrifugal pumps are ideal for booster pumps, soft spray and washing, beverage processing, fire protection and high temp liquids.

For more information on the K Pumps or a catalog on our complete line of pumps and accessories, contact CAT PUMPS 1681 94th Lane N. E. Minneapolis, MN 55449, P-763•780•5440 F-763•780•2958 e-mail sales@catpumps.com OR litorders@catpumps.com OR quotes@catpumps.com
