

PRESS RELEASE

More Pressure. Less Pennies

The new Model 3560 is in direct response to market demands for a compact, portable, high-pressure pump for sewer and pipe cleaning and hydro excavating. The dual high-pressure performance of 20 GPM @ 4000 PSI or 25 GPM @ 3000 PSI is also ideal for wet blasting, surface prep, hydrostatic pressure testing and injection applications. Now, 4000 PSI performance is available in an affordable, portable pump.

CAT PUMPS concentric, solid ceramic plungers and special-blend long-lasting seals are standard pump features. Other special features include:

- Heavy-duty **block-style discharge head** for added strength at 4000 PSI continuous-duty performance.
- Easy to service stainless steel **stacked-valves**. Heat treated, roller burnished stepped seat and quiet valve assure positive seating and exceptional life.
- Secure **4-bolt valve plugs** with o-ring and back-up-ring offer added strength under pressure and easy access to valves.
- High strength **Connecting Rods and Plunger Rods** offer exceptional drive-end life.

Model 3560 Specifications
20 GPM, 4000 PSI, 1160 RPM
25 GPM, 3000 PSI, 1450 RPM
