OPERATION

A Regulating Unloader comes with each 2SFX pump to provide system pressure regulation and pump protection.

For MAXIMUM SUCTION capability, Regulating unloader should be remounted on discharge manifold, OPPOSITE from pump inlet port.

Standard units with return of by-pass back to the inlet of the pump should have a thermo valve in the by-pass line.

By-pass HOSE ASSEMBLY is designed for cold water or ambient temperature operation. DO NOT EXCEED 6 MINUTES in by-pass operation. Excessive temperatures will cause premature wear or damage to the pump and VOID THE WARRANTY.

Hi-Temp Units with special Hi-Temp seals do not use the thermo valve. Use optional dual pressure switches and mechanical relay in auto shut off kits 34870 and 34871.

If unit is INFREQUENTLY USED OR PERIODICALLY STORED, seals may become dry. UNDER SUCTION FEED, system must be PURGED BEFORE OPERATION (system liquid must flow through the pump without discharge restriction) to assure full system pressure is reached.

PERFORMANCE CHART

7224	3 gpm	2.3	150 psi	50	125
7224	4 gpm	2.3	225 psi	50	220

Optimum performance of chemical injector occurs with a 35 ft. high pressure hose and a minimum 3/8 I.D. The type of hose, extended lengths, reduced I.D. and fittings may create back pressure in excess of the low pressure nozzle rating and prevent the injector from drawing chemical. Deduct hose friction loss from the above PSI nozzle. Contact Cat Pumps for assistance with other options.

EXPLODED VIEW

CAUTION

Deduct the pressure drop shown in the performance chart from your desired system pressure to arrive at the maximum high pressure nozzle rating. This is essential to avoid over-pressurizing the pump.

EXAMPLE

$$\left[\begin{array}{l} \text{System - 4 GPM, 2000 PSI} \\ \text{Injector - 7193} \\ \text{Pressure Drop - 250 PSI} \end{array} \right] = \left[\begin{array}{l} \text{Low Pressure Nozzle - 375 PSI} \\ \text{Max. High Pressure Nozzle - 1750 PSI} \end{array} \right]$$

Flush system after chemical application to prevent clogging and to prolong life.

TROUBLESHOOTING

No Chemical Draw:

- Low pressure nozzle sized for too high pressure.
- Air leak in suction line.
- Worn injector orifice.

Leaking Around Adjusting Collar:

- O-ring worn.
- Foreign material in injector.

Cat Pumps does not assume any liability or responsibility for the operation of a customer's high pressure system.

Read all CAUTIONS and WARNINGS before commencing service or operation of any high pressure system. The CAUTIONS and WARNINGS are included in each service manual and with each Accessory Data sheet. CAUTIONS and WARNINGS can also be viewed online at www.catpumps.com/cautions-warnings or can be requested directly from Cat Pumps.
