DIRECT DRIVE PLUNGER PUMPS

Brass Models: **4DX10ER, 4DX15ER, 4DX20ER, 4DX27ER, 4DX30ER**

See page 8 for complete pump model number selection.

Model 4DX10ER Shown

FEATURES

- Fits standard 56C face motors.
- Stacked stainless steel valve design promotes long-life and easy servicing.
- Integral pressure regulator or unloader with built-in bypass standard on all units to assure system pressure control and pump protection.
- Standard pumps are fitted with NBR seals. Optional seals are available for higher temperatures or chemical compatibility.
- Includes crankcase oil.

CHEMICAL INJECTOR PERFORMANCE CHART

Optional Special Ported Chemical Injector for Unloader Mounting

Orifice Size	Maximum Injecting Pressure	Minimum Chemical Draw	Pressure Drop Across Injector at System Pressure
1.8 mm	100 psi	52 oz/min	100 psi
2.1 mm	250 psi	37.2 oz/min	141 psi

Optimum performance of chemical injector occurs with a 35 ft. high-pressure hose and a minimum 3/8" I.D. The type of hose, extended lengths, reduced I.D. and fittings may create back pressures in excess of the low-pressure nozzle rating and prevent the injector from drawing chemical. **Deduct hose friction loss from above low psi nozzle. Consult Cat Pumps for assistance with other options.**

CAUTION: Deduct the pressure drop shown in the performance chart from your desired system pressure to arrive at the maximum high-pressure nozzle rating. This is essential to avoid over-pressurizing the pump.

REGULATING DEVICE

An integral regulator or unloader with built-in bypass is part of the discharge manifold to provide system pressure regulation and pump protection. An optional fixed chemical injector is available. (See back page for proper model identifications)

OPERATION

Pump should be purged of air before commencing with operation. Liquid must flow through the pump without discharge restriction to ensure full system pressure is reached. Install a pressure gauge close to the manifold head of the pump to assist in setting system pressure and to periodically monitor system pressure. Setting and adjusting the regulator or unloader pressure must be done with the system turned on. Start the system with the regulator or unloader backed off to the lowest pressure setting (counterclockwise direction). Squeeze the trigger and read the pressure on the gauge at the pump. Do not read pressure at the gun or nozzle. If more pressure is desired, release the trigger, turn adjusting cap one quarter turn in a clockwise direction. Squeeze the trigger and read the pressure. Repeat this process until the desired system pressure is reached.

NOTE: Pressure is not set at the factory.

SERVICE

The regulator or unloader should be serviced on the same schedule as the seals in the pump. Refer to 4DX Service Manual or start-up, servicing of seals and valves, torque requirements and diagnosis and maintenance chart.

⚠ CAUTIONS AND WARNINGS

All high-pressure systems require a primary pressure regulating device (i.e. regulator, unloader) and a secondary pressure relief device (i.e. pop-off valve, relief valve). Failure to install such relief devices could result in personal injury or damage to pump or property. Cat Pumps does not assume any liability or responsibility for the operation of a customer's high-pressure system. Read all CAUTIONS and WARNINGS before commencing service or operation of any high-pressure system. The CAUTIONS and WARNINGS are included in each Service Manual and with each Accessory Data sheet. CAUTIONS and WARNINGS can also be viewed online at www.catpumps.com/dynamic-literature/cautions-and-warnings or can be requested directly from Cat Pumps.
