Deduct the pressure drop shown in the performance chart from your desired system pressure to arrive at the maximum high-pressure nozzle rating. This is essential to avoid over-pressurizing the pump.

#### EXAMPLE

Flush system after chemical application to prevent clogging and to prolong life.

Optimum performance of chemical injector occurs with a 35 ft. high pressure hose and a minimum % I.D. The type of hose, extended lengths, reduced I.D. and fittings may create back pressure in excess of the low pressure nozzle rating and prevent the injector from drawing chemical. Deduct hose friction loss from the above PSI nozzle. Contact Cat Pumps for assistance with other options.

#### **UNLOADER TYPE**

Each pump comes with a pressure-sensitive regulating unloader.

This unloader will set system pressure. While in bypass the line pressure will drop to a low-pressure mode and then quickly build up to set system pressure when the system is back to full use.

#### **INSTALLATION AND START-UP**

Install a pressure gauge close to the manifold head of the pump to assist in setting system pressure and to periodically monitor system pressure. This pump comes with a bypass line and is redirected to the 1/4" NPT(F) port on bottom side of inlet manifold.

NOTE: If not using a thermo valve DO NOT EXCEED 6 MINUTES in bypass.

NOTE: For high-temperature seal pumps DO NOT USE THERMO VALVE, use optional dual pressure switches and mechanical relays.

Pump should be purged of air before commencing with operation. Liquid must flow through the pump without discharge restriction to ensure full system pressure is reached.

Setting and adjusting the unloader pressure must be done with the system turned on. Start the system with the unloader backed off to the lowest pressure setting (counterclockwise direction). Squeeze the trigger and read the pressure on the gauge at the pump. Do not read pressure at the gun or nozzle. If more pressure is desired, release the trigger, turn adjusting cap one quarter turn in a clockwise direction. Squeeze the trigger and read the pressure. Repeat this process until the desired system pressure is reached. Thread locking nut up to adjusting cap.

NOTE: Pressure is not set at the factory.

#### SERVICE

The unloader should be serviced on the same schedule as the seals in the pump. Refer to SF Plunger Pump Service Manual for start-up, servicing of seals and valves, torque requirements, diagnosis and maintenance chart.

#### ${\rm transmiss}$ cautions and warnings

All high-pressure systems require a primary pressure regulating device (i.e. regulator, unloader) and a secondary pressure relief device (i.e. pop-off valve, relief valve). Failure to install such relief devices could result in personal injury or damage to pump or property. Cat Pumps does not assume any liability or responsibility for the operation of a customer's high-pressure system. Read all CAUTIONS and WARNINGS before commencing service or operation of any high-pressure system. The CAUTIONS and WARNINGS are included in each Service Manual and with each Accessory Data sheet. CAUTIONS and WARNINGS can also be viewed online at www.catpumps.com/dynamic-literature/cautions-and-warnings or can be requested directly from Cat Pumps.
