

TECH BULLETIN 095

Food grade anti-seize lubricant now applied to stainless steel pumps to prevent seizure and damage during assembly of parts during servicing

Starting in June 2004 a food grade anti-seize lubricant (PN 6139) will be applied to all stainless steel pump, valve plugs and seal cases, as well as the screws that mount the discharge manifold to the inlet manifold in block-style pumps. We recommend that this anti-seize be applied at each service interval to all threaded components to prevent seizing, galling, friction and wear on metal-to-metal surfaces.

Part number 6139 is available in an 8 ounce can.

NOTE: PN 6106 anti-seize is not a food grade lubricant. This product is used in bolt mount kits, flexible coupler assemblies, clutch assemblies, direct-drive mounting and flange mount situations.
