SUBJECT: Seal Case and Female Adapter Change - 661
Model 651 Discontinued

The 661 stainless steel pump is typically operating in continuous-duty applications and with industrial liquids that provide lower lubricating qualities. Considerable testing has been done to further extend the life of the seals under these stressful conditions.

The thickness of the Female Adapter has been increased and the Seal Case has been modified with a recessed end to accommodate this thicker Female Adapter.

OLD PARTS

NEW PARTS

The current 48388 Female Adapter and 48465 seal case will no longer be available. The new parts must be installed as a set on all three plungers to assure proper alignment. These new parts are installed in all production pumps starting January 2004.

NOTE: The new Seal Case and Female Adapter can also be used as a set to service all old Model 651 pumps.

Along with this adapter and seal case change, the Model 651 will be discontinued and replaced by the 661. The Model 661 features a Duplex Stainless Steel head for high-strength and chemical compatibility. The proven, dependable 10 GPM @ 3000 PSI performance eliminates the need for the Model 651.
