## Model number changes to 35 Frame stainless steel plunger pumps

To better reflect the materials being used in production of the 35 frame stainless steel plunger pumps, we will be updating model numbers as listed below.

### Improvements:

- Models containing a "D" signifies a duplex stainless steel discharge manifold.
- 316 stainless steel inlet manifold and valves.
- Please note that this is not a change to the materials of construction, just an update to the model number.

### Functionality Changes:

- Some models will also contain a "HS", which is used to designate that drive-end components have been modified using a higher strength material to meet increased performance capabilities.

Effective July of 2018

Old Model Number	New Model Number
3521	3521DHS
3521.44101	3521DHS.44101
3531	3531D
3531HS	3531DHS
3531.44101	3531D.44101
3541	3541D
3541HS	3541DHS
